

Biology A

General Certificate of Secondary Education

Unit **A162/02**: Modules B4, B5, B6 (Higher Tier)

Mark Scheme for June 2012

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

A162/02

Mark Scheme

June 2012

Annotations

Used in the detailed Mark Scheme:

Annotation	Meaning
/	alternative and acceptable answers for the same marking point
(1)	separates marking points
not/reject	answers which are not worthy of credit
ignore	statements which are irrelevant - applies to neutral answers
allow/accept	answers that can be accepted
(words)	words which are not essential to gain credit
<u>words</u>	underlined words must be present in answer to score a mark
ecf	error carried forward
AW/owtte	credit alternative wording/or words to that effect
ORA	or reverse argument

A162/02

Mark Scheme

June 2012

Available in scoris to annotate scripts:

	indicate uncertainty or ambiguity
	benefit of doubt
	contradiction
	incorrect response
	error carried forward
	draw attention to particular part of candidate's response
	no benefit of doubt
	reject
	correct response
 ,  , 	draw attention to particular part of candidate's response
	information omitted

Subject-specific Marking Instructions

- a. Accept any clear, unambiguous response (including mis-spellings of scientific terms if they are *phonetically* correct, but always check the guidance column for exclusions).
- b. Crossed out answers should be considered only if no other response has been made. When marking crossed out responses, accept correct answers which are clear and unambiguous.

eg for a one-mark question where ticks in the third and fourth boxes are required for the mark:

✗
✗

*This would be worth
1 mark.*

✓
✗

*This would be worth
0 marks.*

✗
✗
✓
✓

*This would be worth
1 mark.*

- c. The list principle:
If a list of responses greater than the number requested is given, work through the list from the beginning. Award one mark for each correct response, ignore any neutral response, and deduct one mark for any incorrect response, eg one which has an error of science. If the number of incorrect responses is equal to or greater than the number of correct responses, no marks are awarded. A neutral response is correct but irrelevant to the question.

A162/02

Mark Scheme

June 2012

d. Marking method for tick-box questions:

If there is a set of boxes, some of which should be ticked and others left empty, then judge the entire set of boxes.

If there is at least one tick, ignore crosses and other markings. If there are no ticks, accept clear, unambiguous indications, eg shading or crosses. Credit should be given according to the instructions given in the guidance column for the question. If more boxes are ticked than there are correct answers, then deduct one mark for each additional tick. Candidates cannot score less than zero marks.

eg if a question requires candidates to identify cities in England:

Edinburgh	☐
Manchester	☐
Paris	☐
Southampton	☐

the second and fourth boxes should have ticks (or other clear indication of choice) and the first and third should be blank (or have indication of choice crossed out).

Edinburgh			✓			✓	✓	✓	✓	
Manchester	✓	x	✓	✓	✓				✓	
Paris				✓	✓		✓	✓	✓	
Southampton	✓	x		✓		✓	✓		✓	
Score:	2	2	1	1	1	1	0	0	0	NR

- e. For answers marked by levels of response:
- Read through the whole answer from start to finish**
 - Decide the level** that **best fits** the answer – match the quality of the answer to the closest level descriptor
 - To determine the mark within the level**, consider the following:

Descriptor	Award mark
A good match to the level descriptor	The higher mark in the level
Just matches the level descriptor	The lower mark in the level

- iv. Use the **L1**, **L2**, **L3** annotations in Scoris to show your decision; do not use ticks.

Quality of Written Communication skills assessed in 6-mark extended writing questions include:

- appropriate use of correct scientific terms
- spelling, punctuation and grammar
- developing a structured, persuasive argument
- selecting and using evidence to support an argument
- considering different sides of a debate in a balanced way
- logical sequencing.

Mark Scheme

June 2012

Question			Answer	Marks	Guidance															
1	(a)		<u>retina</u> (1)	1	reject eyeball															
	(b)		<table border="1"><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td>The light stimulus was connected to a secondary stimulus.</td><td>✓</td><td>(1)</td></tr></table>													The light stimulus was connected to a secondary stimulus.	✓	(1)	1	accept any clear indication of a correct response, eg cross if no ticks shown or shaded box if more than 1 response = 0 marks
The light stimulus was connected to a secondary stimulus.	✓	(1)																		
	(c)		axon/fibre/dendrite slowly/slower/slow (1)	1	2 correct responses = 1 mark responses must be in correct order															
	(d)	(i)	<i>any two from:</i> few/only two or three neurons involved; has few synapses; does not have to go to brain (and back); shorter distance; you do not have to think about it/involuntary;	1	2 correct responses = 1 mark accept is an unconscious action ignore automatic															

A162/02

Mark Scheme

June 2012

Question			Answer	Marks	Guidance
		(ii)	(Level 3) Response must include most stages in the reflex arc and references to different aspects of damage impact. Quality of written communication does not impede communication of the science at this level. (5–6 marks) (Level 2) Response must include some stages in the reflex arc and one correct reference to damage impact. Quality of written communication partly impedes communication of the science at this level. (3–4 marks) (Level 1) Response includes at least one stage in the reflex arc and includes one correct reference to damage impact. There may be limited use of specialist terms. Quality of written communication impedes communication of the science at this level. (1–2 marks) (Level 0) Insufficient or irrelevant science. Answer not worthy of credit. (0 marks)	6	This question is targeted at grades up to A* Indicative scientific points may include: Reflex arc: - stimulus detected by receptor - impulse created (at receptor) - impulse travels from receptor to sensory neuron - order of sensory, relay and motor neurons - correct reference to synapses - travels along relay neuron (in spinal cord) - travels along motor neuron/nerve - ends with effector/muscle - named example of effector action eg muscle contraction/leg straightens - brain not involved Impact of damage: - reflex arc is not affected by the damage - damage above the point where reflex arc takes place - impulse transmission up to/down from brain is blocked - ascending/sensory pathways/neurons and/or descending/motor pathways/neurons <i>in spinal cord</i> cut/damage/severed Use the L1, L2 and L3 annotations in Scoris, do not use ticks.

June 2012

Question			Answer	Marks	Guidance																		
		(iii)	<table><tr><td>Carry out each trial for a shorter period of time.</td><td></td><td></td></tr><tr><td>Carry out the trials using female patients only.</td><td></td><td></td></tr><tr><td>Compare the drug against a placebo.</td><td>✓</td><td>(1)</td></tr><tr><td>Decrease the dose of drug in the second trial.</td><td></td><td></td></tr><tr><td>Give the participants other drugs at the same time.</td><td></td><td></td></tr><tr><td>Use more than one patient.</td><td>✓</td><td>(1)</td></tr></table>	Carry out each trial for a shorter period of time.			Carry out the trials using female patients only.			Compare the drug against a placebo.	✓	(1)	Decrease the dose of drug in the second trial.			Give the participants other drugs at the same time.			Use more than one patient.	✓	(1)	2	accept any clear indication of a correct response eg crosses if no ticks shown or shaded boxes if more than 2 responses – deduct 1 mark for each additional response
Carry out each trial for a shorter period of time.																							
Carry out the trials using female patients only.																							
Compare the drug against a placebo.	✓	(1)																					
Decrease the dose of drug in the second trial.																							
Give the participants other drugs at the same time.																							
Use more than one patient.	✓	(1)																					
	(d)		<i>any two from:</i> correct technique used eg brain damaged patients/electrical stimulation/MRI scans/CAT scans; (1) many other patients could benefit from the outcome; (1) patients have rights/may not be able to give (informed) consent/the patient may be harmed; (1)	2	OWTTE accept TMS (transcranial magnetic stimulation)/EEG (electroencephalography)/PET (positron emission tomography)/brain surgery (must be qualified)/dissection of brain from dead person																		
			Total	10

June 2012

Question			Answer	Marks	Guidance
3	(a)		<u>4</u> (1)	1	
	(b)	(i)	negative correlation/rate of reaction drops as temperature increases and then the rate levels off/rate is zero at temperatures higher than 68/70 °C (1)	1	OWTTE accept correct references to the data to support the explanation accept rate slows down and then stops at 70 °C = 1 mark accept rate slows down and then no reaction after 70 °C = 1 mark
		(ii)	(increasing) temperature causes enzyme (molecule) to change shape/be denatured (1) substrate/molecule no longer fits (so well) into active site/no enzyme-substrate complex formed (1) so enzyme cannot catalyse/speed up the reaction/the rate decreases (1)	3	OWTTE accept correct references to the lock and key model reject enzyme dies/killed ignore enzyme does not work any more
	(c)		pH changes the shape of the active site (which affects the rate of reaction) (1)	1	accept another correct factor eg concentration of substrate/enzyme molecules, if explanation is appropriate accept denatured
			Total	6	

A162/02

Mark Scheme

June 2012

Question			Answer	Marks	Guidance
4	(a)		yellow purple (1)	1	2 correct responses = 1 mark responses must be in correct order
	(b)		<i>any three from:</i> limited/reduced photosynthesis (due to fabric mesh); (1) respiration continues at the same rate; (1) CO ₂ removed (by photosynthesis) equals CO ₂ added (by respiration); (1) rate of photosynthesis equals rate of respiration; (1) no change in CO ₂ levels; (1)	3	OWTTE ignore references to light available ignore photosynthesis stops ignore reference to CO ₂ levels are balanced/constant
	(c)		temperature (1)	1	ignore water reject heat
	(d)		<i>any two from:</i> plant/leaf will have adapted to low light/dark conditions; (1) may have more chloroplasts/chlorophyll; (1) will be more efficient at/better at/quicker photosynthesis ; (1)	2	OWTTE accept used to = adapted to accept fast rate/increased level = quicker (rate of photosynthesis)
			Total	7

Mark Scheme

June 2012

Question			Answer	Marks	Guidance
5	(a)	(i)	glucose (AND) ethanol + carbon dioxide;	1	1 mark for complete word equation ignore formulae accept "alcohol" for ethanol
		(ii)	(left hand side) $C_6H_{12}O_6 + 6O_2$; (right hand side) $6CO_2 + 6H_2O$;	2	1 mark for each side of the equation = 2 marks formulae must be exactly as shown in answer box but order can be reversed within right hand side and within left hand side
	(b)	(i)	cell wall mitochondrion/mitochondria	1	both correct = 1 mark must be in correct order ignore reference to 'cellulose' for cell wall response

Question			Answer	Marks	Guidance
	(ii)		(Level 3) Response must include most structures with reference to their functions and to both forms of respiration (qualified), as appropriate. Quality of written communication does not impede communication of the science at this level. (5–6 marks) (Level 2) Response must include some structures with reference to their functions and to at least one of the two forms of respiration (qualified). Quality of written communication partly impedes communication of the science at this level. (3–4 marks) (Level 1) Response must include at least one named structure with reference to its function and to respiration (qualified) OR correctly identifies the sites of aerobic and anaerobic respiration. There may be limited use of specialist terms. Quality of written communication impedes communication of the science at this level. (1–2 marks) (Level 0) Insufficient or irrelevant science. Answer not worthy of credit. (0 marks)	6	This question is targeted at grades up to C Indicative scientific points may include: cell membrane: - cell membrane oxygen passes into cell - oxygen used for aerobic respiration - cell membrane carbon dioxide passes out of cell (freely) - carbon dioxide released from aerobic/anaerobic respiration - cell membrane alcohol/ethanol passes out of cell - alcohol/ethanol released from anaerobic respiration cytoplasm: cytoplasm contains enzymes for reactions (these reactions) are anaerobic/aerobic respiration cytoplasm is the site of enzyme/protein synthesis - enzymes used for anaerobic/aerobic respiration mitochondria: mitochondria contain enzymes for reactions (these reactions) are aerobic respiration nucleus: nucleus contains genetic code/DNA for production of enzymes/proteins (these enzymes/proteins) needed in respiration - aerobic respiration needs all structures - anaerobic respiration does not use mitochondria Use the L1, L2 and L3 annotations in Scoris, do not use ticks.

Question			Answer					Marks	Guidance																									
	(c)		<table><tr><td>DNA feature</td><td colspan="4"></td></tr><tr><td>number of strands</td><td>1</td><td>2</td><td>3</td><td>4</td></tr><tr><td>number of different types of bases</td><td>2</td><td>3</td><td>4</td><td>5</td></tr><tr><td>arrangement of bases between the strands</td><td>fours</td><td>pairs</td><td>single</td><td>triplets</td></tr><tr><td>shape of molecule</td><td>circular</td><td>cube</td><td>helix</td><td>sheet</td></tr></table>					DNA feature					number of strands	1	2	3	4	number of different types of bases	2	3	4	5	arrangement of bases between the strands	fours	pairs	single	triplets	shape of molecule	circular	cube	helix	sheet	1	must show all 4 correct responses = 1 mark if more than 4 responses = 0 marks
DNA feature																																		
number of strands	1	2	3	4																														
number of different types of bases	2	3	4	5																														
arrangement of bases between the strands	fours	pairs	single	triplets																														
shape of molecule	circular	cube	helix	sheet																														

Question		Answer	Marks	Guidance
	(d)	(Level 3) Response includes a clear reference to coded message, <u>mRNA</u> in cytoplasm/ribosome involved in protein synthesis and link between sequence of bases with order of amino acids (on protein). Quality of written communication does not impede communication of the science at this level. (5–6 marks) (Level 2) Response also includes DNA held in nucleus and/or <u>mRNA</u> leaves nucleus. Quality of written communication partly impedes communication of the science at this level. (3–4 marks) (Level 1) Response includes reference to the coded message/genetic code/bases, on DNA/mRNA (<i>accept RNA = mRNA at this level</i>). There may be limited use of specialist terms. Quality of written communication impedes communication of the science at this level. (1–2 marks) (Level 0) Insufficient or irrelevant science. Answer not worthy of credit. (0 marks)	6	This question is targeted at grades up to A* Indicative scientific points may include: Features of DNA: • DNA remains/located in the nucleus • DNA holds the code (for protein synthesis) • genetic code is a series of bases • four types of bases = A, T, C and G • the bases always pair in the same way • DNA is a double helix • the two strands of DNA are held together by pairs of bases • DNA unzips to form (template for) mRNA Feature of mRNA involvement: • mRNA synthesised from exposed/unzipped DNA • mRNA leaves the nucleus • mRNA carries coded message out to the cytoplasm • protein synthesis (can now) takes place in the cytoplasm (accept ref. to ribosome = cytoplasm) • the order of bases in mRNA is linked to the type of amino acid put into the protein (accept ref. to triplet code = order of bases) • the order of amino acids determines the particular type of protein Use the L1, L2 and L3 annotations in Scoris, do not use ticks.

June 2012

Question			Answer	Marks	Guidance
7	(a)	(i)	light from above allows the auxin to be evenly distributed ; auxin promotes/stimulates plant growth/cell division/cell elongation and so the shoot grows straight/grows upwards/without curvature;	2	OWTTE ignore reference to no shading-effect
		(ii)	suggested result/appearance: the seedlings appear to be straight/start to curve in the opposite direction; explanation: light from one side causes auxin to collect on the shaded side and so the shoot grows/cells elongate (more) on the shaded side (and curves);	2	OWTTE ignore face/turn (the other way) accept bend/lean
	(b)		No because... <i>any two from:</i> other plants grow differently to cress; (1) light (from the sun) changes position throughout each day in the garden; (1) other (competitive) plants will grow in the garden; (1) most factors vary outdoors (eg temperature/moisture/light intensity); (1) predators will be present in the garden (eg slugs/birds/etc); (1) cress seedlings observed for only 48 hours/plants in garden grown for longer than 48 hours; (1) Yes because ... sun moves across the garden each day/plants follow the sun; (1)	2	no marks for saying 'no'; credit only given for supporting reasons OWTTE accept sun not always out/darkness at night time no marks for saying 'yes'; credit only given for supporting reasons if yes with an explanation = 1 mark max
