Unit 3: Practical Skills

Practical Booklet B
Foundation Tier

GCM32

[GCM32]
MONDAY 26 JUNE, MORNING

TIME

1 hour.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.
You must answer the questions in the spaces provided.
Do not write outside the boxed area on each page or on blank pages.
Complete in black ink only. **Do not write with a gel pen.**
Answer **all five** questions.

INFORMATION FOR CANDIDATES

The total mark for this paper is 70.
Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.
Quality of written communication will be assessed in Question **1(b)**.
A Data Leaflet including a Periodic Table of the Elements is provided.

1 **(a)** The table below shows some tests carried out on sodium chloride.

Test	Procedure	Observations
1	A few drops of **Solution A** were added to a solution of sodium chloride.	White precipitate
2	A flame test was carried out by dipping a piece of nichrome wire into **Liquid B** and then into a sample of solid sodium chloride. The wire was placed in a blue Bunsen burner flame.	
3	A few drops of sodium chloride solution were placed on universal indicator paper.	Colour changes to green

(i) Name **Solution A**.

_____ [1]

(ii) Name the white precipitate formed in Test 1.

_____ [1]

(iii) Name **Liquid B**.

_____ [2]

(iv) What would be observed when Test 2 was carried out?

_____ [1]

(v) Using the results from Test 3, state the pH of sodium chloride solution.

_____ [1]

(vi) What colour would be observed when sodium chloride solution is tested using red litmus paper and blue litmus paper?

Red litmus paper: _____

Blue litmus paper: _____ [2]

[Turn over

(b) A white solid is thought to be sodium sulfate. Describe the practical steps and test you would carry out to show that the solid contains sulfate ions.

In this question you will be assessed on your written communication skills including the use of specialist scientific terms.

[6]

BLANK PAGE

DO NOT WRITE ON THIS PAGE

(Questions continue overleaf)

[Turn over

2 Oxygen gas may be prepared from the catalytic decomposition of hydrogen peroxide.

(a) (i) The symbol equation for the decomposition of hydrogen peroxide solution is shown below. Balance the equation and insert state symbols.

$$H_2O_2(\quad) \rightarrow H_2O(\quad) + O_2(\quad)$$

[2]

(ii) State the colour of hydrogen peroxide solution.

_____ [1]

(iii) Name the catalyst used for the decomposition of hydrogen peroxide.

_____ [1]

(iv) What is meant by the term catalyst?

_____

_____

_____ [2]

(v) Describe the test for oxygen gas.

_____

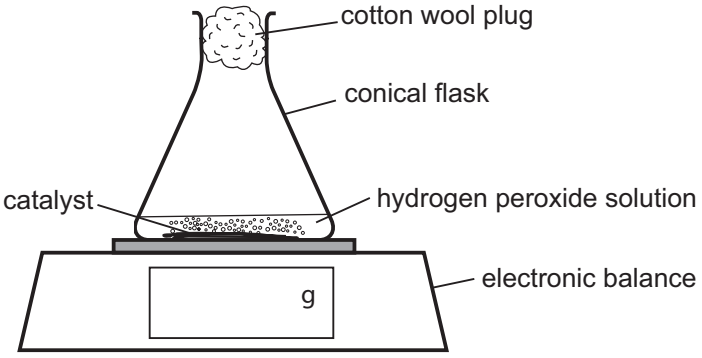
_____ [1]

(vi) State two physical properties of oxygen gas.

1. _____

2. _____ [2]

(b) The apparatus below is used to monitor the mass during the catalytic decomposition of a sample of 25.0 cm^3 of hydrogen peroxide solution over a period of time.



(i) Explain why the results obtained from the experiment are more reliable when a cotton wool plug is placed in the top of the conical flask.

_____

_____

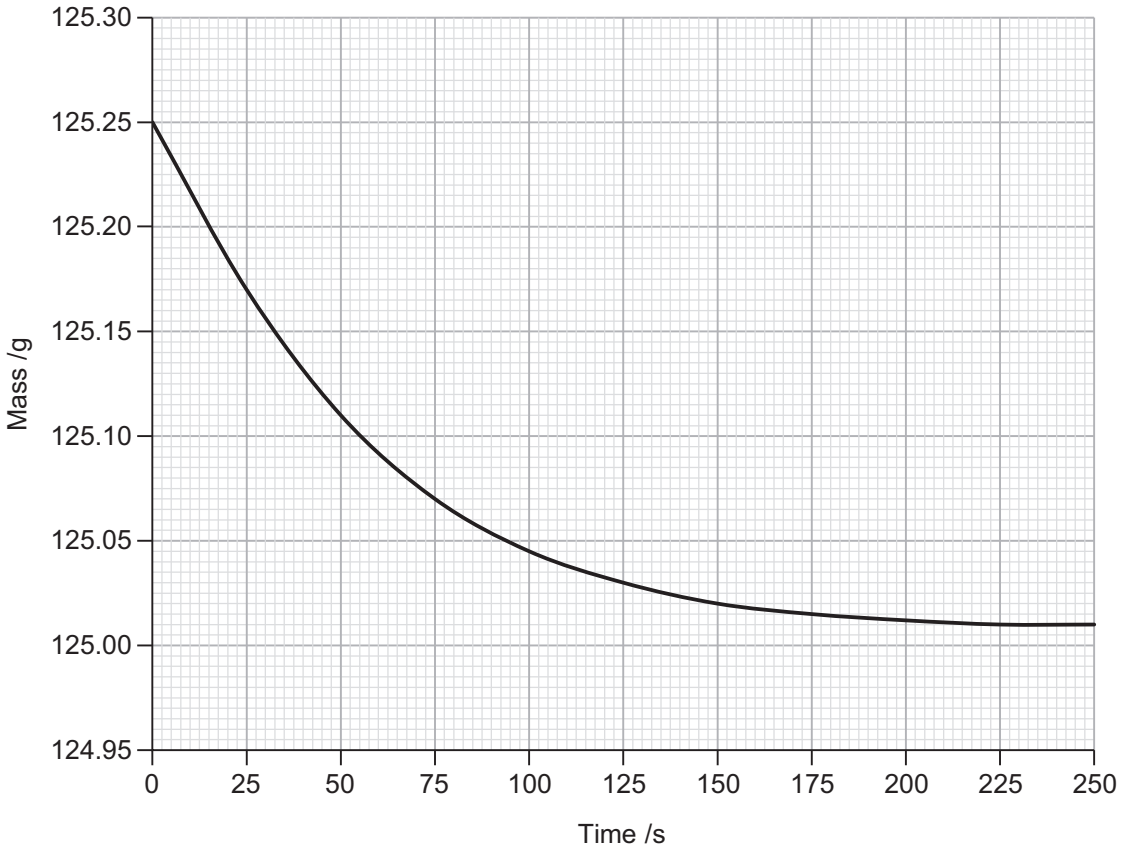
_____ [2]

(ii) What piece of apparatus is missing from the diagram?

_____ [1]

[Turn over

(c) The results of the experiment in **(b)** are plotted on the graph below.



(i) Explain why the graph levelled off.

_____

_____ [1]

(ii) At what time was the loss in mass 0.15 g?

_____ [1]

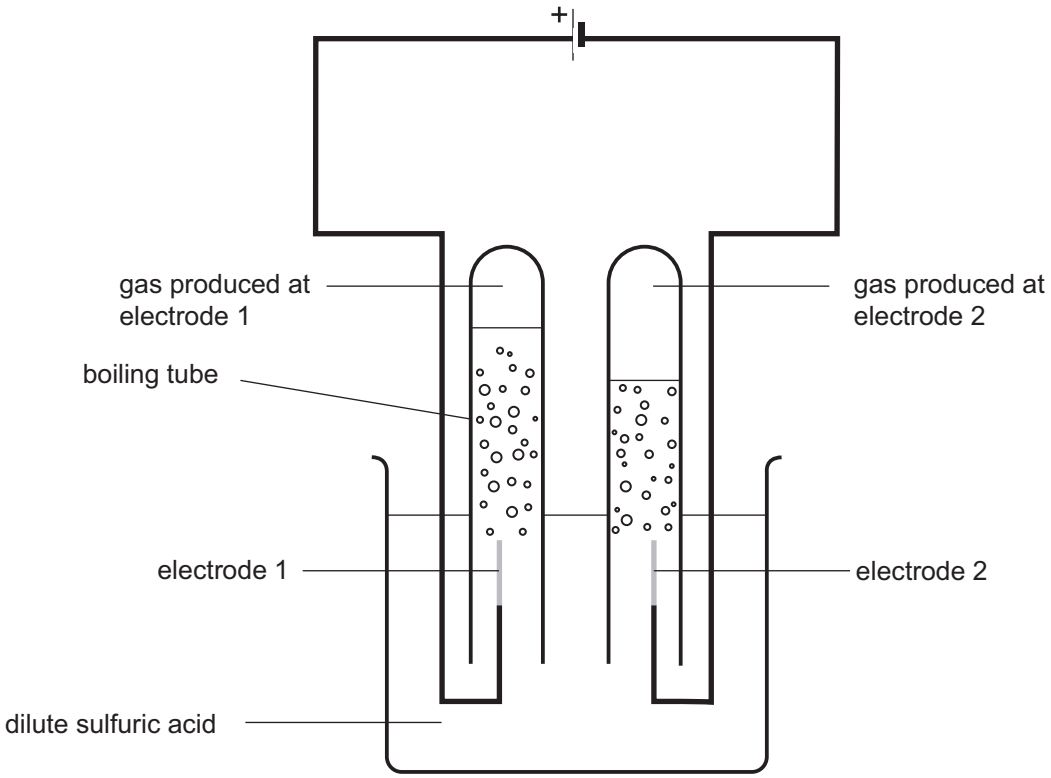
(iii) Calculate the total loss in mass during the experiment.
Show your working out.

loss in mass = _____ g [2]

[Turn over

3 Hydrogen gas may be generated from the electrolysis of dilute sulfuric acid.

(a) The apparatus shown in the diagram below may be used for the electrolysis of dilute sulfuric acid. The electrodes are made from platinum.



(i) What is meant by the term electrolysis?

_____

_____ [1]

(ii) State two reasons why platinum is used for the electrodes.

1. _____

2. _____ [2]

(iii) Write the formula for sulfuric acid.

_____ [1]

(iv) Explain why dilute sulfuric acid conducts electricity.

_____

_____ [1]

(v) Complete the table below for the electrolysis of dilute sulfuric acid.

	Electrode 1	**Electrode 2**
Name of electrode		
Name of gas produced		

[4]

(b) Hydrogen reacts with nitrogen gas to form ammonia.

Describe how you would carry out the test to identify ammonia gas.

_____

_____

_____

_____ [4]

[Turn over

4 Hydrated chromium(III) nitrate, $Cr(NO_3)_3.9H_2O$, is a violet solid. All of the water of crystallisation may be removed by heating a sample of the solid to constant mass.

The following mass measurements were taken.

Mass of crucible /g	25.24
Mass of crucible and hydrated solid /g	29.24
Mass of crucible and solid after heating to constant mass /g	27.62

(a) Draw a labelled diagram of the assembled apparatus used to heat the solid.

[4]

(b) What is meant by water of crystallisation?

_____

_____ [1]

(c) Explain how the solid may be heated to constant mass.

_____

_____ [2]

(d) Calculate the mass of the hydrated solid in the crucible.

mass = _____ g [1]

(e) Calculate the mass of water of crystallisation present in the hydrated solid.

mass = _____ g [1]

(f) Calculate the mass of the solid remaining after heating to constant mass.

mass = _____ [1]

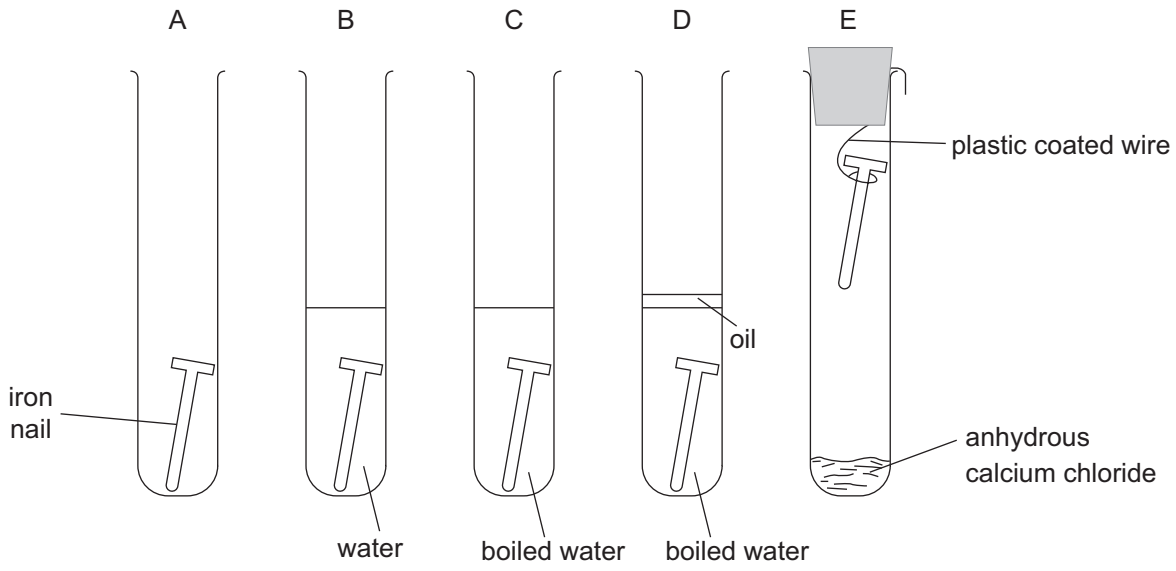
(g) Calculate the relative formula mass (M_r) of hydrated chromium(III) nitrate, $Cr(NO_3)_3.9H_2O$

relative formula mass (M_r) _____ [1]

[Turn over

5 **(a)** The diagram below shows an experiment which was set up to investigate rusting using five iron nails in test tubes. The test tubes were labelled A to E.
In test tube E, the nail was suspended using plastic coated wire.

The nails were checked daily for rust over a period of two weeks.



(i) Describe the appearance of rust.

_____ [2]

(ii) In which of the test tubes (A, B, C, D or E) would rust appear first?

_____ [1]

(iii) Explain why the iron nail in test tube D does not rust.

_____

_____

_____ [2]

(iv) What is the purpose of the anhydrous calcium chloride in test tube E?

_____

_____ [1]

(v) Explain why the nail was suspended in test tube E.

_____

_____ [1]

(vi) What is the chemical name for rust?

_____ [2]

(b) The experiment in **(a)** was repeated using galvanised nails.

(i) What is meant by galvanised?

_____

_____ [1]

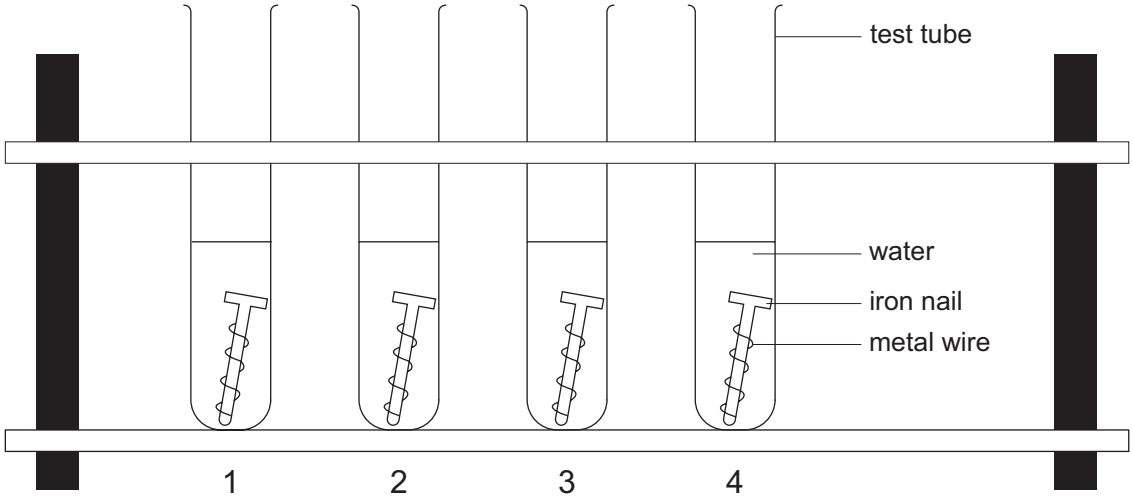
(ii) Explain why no rust would form when galvanised nails were used.

_____

_____ [1]

[Turn over

(c) The following experiment was set up to determine which metals offer sacrificial protection to iron.



Pieces of metal ribbon or wires were wrapped around the iron nails. The nails were placed in water in four test tubes as shown above. The table below shows which metals were wrapped around the nails.

Test tube	Metal wire/ribbon	Does rust form?
1	magnesium	No
2	silver	
3	copper	
4	zinc	

(i) Complete the table. [3]

(ii) Explain why rust does not form in test tube 1.

_____

_____

_____ [2]

SYMBOLS OF SELECTED IONS

Positive ions

Name	Symbol
Ammonium	NH_4^+
Chromium(III)	Cr^{3+}
Copper(II)	Cu^{2+}
Iron(II)	Fe^{2+}
Iron(III)	Fe^{3+}
Lead(II)	Pb^{2+}
Silver	Ag^+
Zinc	Zn^{2+}

Negative ions

Name	Symbol
Butanoate	$C_3H_7COO^-$
Carbonate	CO_3^{2-}
Dichromate	$Cr_2O_7^{2-}$
Ethanoate	CH_3COO^-
Hydrogencarbonate	HCO_3^-
Hydroxide	OH^-
Methanoate	$HCOO^-$
Nitrate	NO_3^-
Propanoate	$C_2H_5COO^-$
Sulfate	SO_4^{2-}
Sulfite	SO_3^{2-}

SOLUBILITY IN COLD WATER OF COMMON SALTS, HYDROXIDES AND OXIDES

Soluble
All sodium, potassium and ammonium salts
All nitrates
Most chlorides, bromides and iodides EXCEPT silver and lead chlorides, bromides and iodides
Most sulfates EXCEPT lead and barium sulfates Calcium sulfate is slightly soluble

Insoluble
Most carbonates EXCEPT sodium, potassium and ammonium carbonates
Most hydroxides EXCEPT sodium, potassium and ammonium hydroxides
Most oxides EXCEPT sodium, potassium and calcium oxides which react with water
