

# Mark Scheme (Results)

Summer 2019

Pearson Edexcel GCSE  
In Physics (1PH0) Paper 2H

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Mark schemes have been developed so that the rubrics of each mark scheme reflects the characteristics of the skills within the AO being targeted and the requirements of the command word. So for example the command word 'Explain' requires an identification of a point and then reasoning/justification of the point.

Explain questions can be asked across all AOs. The distinction comes whether the identification is via a judgment made to reach a conclusion, or, making a point through application of knowledge to reason/justify the point made through application of understanding. It is the combination and linkage of the marking points that is needed to gain full marks.

When marking questions with a 'describe' or 'explain' command word, the detailed marking guidance below should be consulted to ensure consistency of marking.

| Assessment Objective |           | Command Word                                                                                                                    |                                                                                                                                         |
|----------------------|-----------|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Strand               | Element   | Describe                                                                                                                        | Explain                                                                                                                                 |
| AO1                  |           | An answer that combines the marking points to provide a logical description                                                     | An explanation that links identification of a point with reasoning/justification(s) as required                                         |
| AO2                  |           | An answer that combines the marking points to provide a logical description, showing application of knowledge and understanding | An explanation that links identification of a point (by applying knowledge) with reasoning/justification (application of understanding) |
| AO3                  | 1a and 1b | An answer that combines points of interpretation/evaluation to provide a logical description                                    |                                                                                                                                         |
| AO3                  | 2a and 2b |                                                                                                                                 | An explanation that combines identification via a judgment to reach a conclusion via justification/reasoning                            |
| AO3                  | 3a        | An answer that combines the marking points to provide a logical description of the plan/method/experiment                       |                                                                                                                                         |
| AO3                  | 3b        |                                                                                                                                 | An explanation that combines identifying an improvement of the experimental procedure with a linked justification/reasoning             |

| Question Number | Answer                                                                                                                                                                                                                                                                                                               | Mark |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 1(a)(i)         | <p><b>The only correct answer is A:</b> It removes electrons from the paint drops</p> <p><b>B is incorrect</b> because that would give an overall negative charge to the drops</p> <p><b>C is incorrect</b> because protons are not transferred</p> <p><b>D is incorrect</b> because protons are not transferred</p> | (1)  |

| Question Number: | Answer                                                                                                                               | Additional Guidance                                           | Mark |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|------|
| 1(a)(ii)         | <p>An explanation linking</p> <p>like charged drops are repelling each other (1)</p> <p>(so) spray is wider (from sprayer Y) (1)</p> | <p>more spread out / finer / larger area / more dispersed</p> | (2)  |

| Question Number | Answer                                                                                                                                                             | Additional Guidance                                       | Mark |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------|------|
| 1(a)(iii)       | <p>An explanation linking</p> <p>metal (wire) can conduct electrons / charge (from earth) (1)</p> <p>(so) prevent (positive) charge accumulating on object (1)</p> | <p>metal is a conductor</p> <p>discharge (the object)</p> | (2)  |

| Question Number | Answer                                                                                                                                                                                                                    | Additional Guidance                                                      | Mark |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|------|
| 1(b)            |  <p>at least three vertical straight lines (equally spaced) (1)</p> <p><b>with</b><br/>at least one arrow in the right direction (1)</p> | <p>judge by eye</p> <p>any arrow in the wrong direction = 1 mark max</p> | (2)  |

**Total for Question 1 = 7 marks)**

| Question Number | Answer                                                                                                                                                                                                                                                                                                                                                                | Mark |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 2(a)            | <p><b>The only correct answer is B:</b> work done= force x distance moved in direction of force</p> <p><b>A is incorrect</b> because the equation would be dimensionally inconsistent</p> <p><b>C is incorrect</b> because the equation would be dimensionally inconsistent</p> <p><b>D is incorrect</b> because the direction of the distance moved is incorrect</p> | (1)  |

| Question Number | Answer                                                                                                                                   | Additional guidance                                                                                                                                                                                                                                                                  | Mark |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 2(b)(i)         | <p>substitution (1)<br/>(<math>\Delta GPE =</math>) <math>(0.0)46 \times 10 \times 2.05</math></p> <p>evaluation (1)<br/>0.94(3) (J)</p> | <p>allow <math>g = 9.8(1) \text{ m/s}^2</math></p> <p>0.9 (J)<br/>values that round to 0.92 or 0.93<br/>(from using <math>g = 9.8</math> or 9.81)</p> <p>do not award for 1(J)</p> <p>no POT error in evaluation</p> <p>award full marks for the correct answer without working.</p> | (2)  |

| Question Number | Answer                                                                                                                                                                                                 | Additional guidance                                                                                                                                                         | Mark |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 2(b)(ii)        | <p>recall (1)<br/> <math>(KE =) \frac{1}{2} \times m \times v^2</math></p> <p>substitution (1)<br/> <math>(KE =) \frac{1}{2} \times (0.046 \times 3.5^2</math></p> <p>evaluation (1)<br/> 0.28 (J)</p> | <p>allow answers that round to 0.28 e.g. 0.28175 (J)</p> <p>allow max 2 marks for POT error e.g. 0.00028</p> <p>award full marks for the correct answer without working</p> | (3)  |

| Question Number | Answer                                           | Additional guidance | Mark |
|-----------------|--------------------------------------------------|---------------------|------|
| 2(b)(iii)       | Any value between 0.8 (m) and 0.95 (m) inclusive |                     | (1)  |

| Question Number | Answer                                                                                                                                    | Additional guidance                                                                                                                                                                                                                                                                                                   | Mark |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 2(b)(iv)        | <p>An explanation linking</p> <p>(the ball) has lost energy<br/>(1)</p> <p>identification of what has happened to that energy<br/>(1)</p> | <p>accept<br/>(energy) dissipated<br/><b>or</b><br/>(transferred to)<br/>surroundings / ground<br/><b>or</b><br/>thermal energy<br/><b>or</b><br/>heat / sound<br/><b>or</b><br/>system is not 100% efficient<br/><b>or</b><br/>bounce is not (100%) elastic<br/><b>or</b><br/>squashing (the ball or the ground)</p> | (2)  |

---

**(Total for Question 2 = 9 marks)**

| Question Number | Answer                                                                                                                                                                                                                                                                                                                                          | Mark |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 3(a)            | <p>The only correct answer is D</p>  <p><b>A is incorrect</b> because that is the symbol for a diode<br/> <b>B is incorrect</b> because that is the symbol for a light dependent resistor<br/> <b>C is incorrect</b> because that is a symbol for a motor</p> | (1)  |

| Question Number | Answer                                                                                                                                                                                                                  | Additional guidance                                                                                                                                                                                                                                                                                                                                               | Mark |
