**MARK
SCHEME**

General Marking Instructions

Introduction

Mark schemes are intended to ensure that the GCSE examinations are marked consistently and fairly. The mark schemes provide markers with an indication of the nature and range of candidates' responses likely to be worthy of credit. They also set out the criteria which they should apply in allocating marks to candidates' responses.

Assessment objectives

Below are the assessment objectives for GCSE Double Award Science.

Candidates must:

- AO1** Demonstrate knowledge and understanding of:
- scientific ideas; and
 - scientific techniques and procedures;
- AO2** Apply knowledge and understanding of and develop skills in:
- scientific ideas; and
 - scientific enquiry, techniques and procedures; and
- AO3** Analyse scientific information and ideas to:
- interpret and evaluate;
 - make judgements and draw conclusions; and
 - develop and improve experimental procedures.

Quality of candidates' responses

In marking the examination papers, examiners should be looking for a quality of response reflecting the level of maturity which may reasonably be expected of a 16-year-old which is the age at which the majority of candidates sit their GCSE examinations.

Flexibility in marking

Mark schemes are not intended to be totally prescriptive. No mark scheme can cover all the responses which candidates may produce. In the event of unanticipated answers, examiners are expected to use their professional judgement to assess the validity of answers. If an answer is particularly problematic, then examiners should seek the guidance of the Supervising Examiner.

Positive marking

Examiners are encouraged to be positive in their marking, giving appropriate credit for what candidates know, understand and can do rather than penalising candidates for errors or omissions. The exception to this for GCSE Double Award Science is when examiners are marking complex calculations when the Examiners are briefed to mark by error or omission. Examiners should make use of the whole of the available mark range for any particular question and be prepared to award full marks for a response which is as good as might reasonably be expected of a 16-year-old GCSE candidate.

Awarding zero marks

Marks should only be awarded for valid responses and no marks should be awarded for an answer which is completely incorrect or inappropriate.

Marking Calculations

In marking answers involving calculations, examiners should apply the 'carry error through' rule so that candidates are not penalised more than once for a computational error. To avoid a candidate being penalised, marks can be awarded where correct conclusions or inferences are made from their incorrect calculations.

Types of mark schemes

Mark schemes for tasks or questions which require candidates to respond in extended written form are marked on the basis of levels of response which take account of the quality of written communication.

Other questions which require only short answers are marked on a point for point basis with marks awarded for each valid piece of information provided.

Levels of response

In deciding which level of response to award, examiners should look for the number of indicative content points in candidate responses to ensure that the answer has been written to coincide with the question. In deciding which mark within a particular level to award to any response, quality of communication will be assessed and examiners are expected to use their professional judgement.

The following guidance is provided to assist examiners.

- **Threshold performance:** Response which just merits inclusion in the level and should be awarded a mark at or near the bottom of the range.
- **High performance:** Response which fully satisfies the level description and should be awarded a mark at or near the top of the range.

Quality of written communication

Quality of written communication is taken into account in assessing candidates' responses to all tasks and questions that require them to respond in extended written form. These tasks and questions are marked on the basis of bands of response. The description for each band of response includes reference to the quality of written communication.

For conciseness, quality of written communication is distinguished within bands of response as follows:

Band A: Quality of written communication is excellent.

Band B: Quality of written communication is good.

Band C: Quality of written communication is basic.

Band D: Response not worthy of credit.

In interpreting these band descriptions, examiners should refer to the more detailed guidance provided below:

Band A (Excellent): Excellent reference to scientific terminology. The candidate successfully selects and uses the most appropriate form and style of writing. Relevant material is organised with a high degree of clarity and coherence. There is widespread and accurate use of appropriate specialist vocabulary. Presentation, spelling, punctuation and grammar are of a sufficiently high standard to make meaning clear.

Band B (Good): Good reference to scientific terminology. The candidate makes a reasonable selection and use of an appropriate form and style of writing. Relevant material is organised with some clarity and coherence. There is some use of appropriate specialist vocabulary. Presentation, spelling, punctuation and grammar are sufficiently competent to make meaning clear.

Band C (Basic): Basic reference to scientific terminology. The candidate makes only a limited selection and use of an appropriate form and style of writing. The organisation of material may lack clarity and coherence. There is little use of specialist vocabulary. Presentation, spelling, punctuation and grammar may be such that intended meaning is not clear.

COVID-19 Context

Given the unprecedented circumstances presented by the COVID-19 public health crisis, senior examiners, under the instruction of CCEA awarding organisation, are required to train assistant examiners to apply the mark scheme in case of disrupted learning and lost teaching time. The interpretation and intended application of the mark scheme for this examination series will be communicated through the standardising meeting by the Chief or Principal Examiner and will be monitored through the supervision period. This paragraph will apply to examination series in 2021–2022 only.

			AVAILABLE MARKS
1	(a) (i) protein	[1]	7
	(ii) speed up	[1]	
	(iii) not used up	[1]	
	(iv) 60 °C	[1]	
	(b) active site	[1]	
2	(c) Any two : pH; enzyme concentration; substrate concentration; inhibitor; concentration on its own = [1]	[2]	5
	(a) renal artery	[1]	
	(b) one tube drawn linking kidney and the bladder (tube must be from under A on kidney to bottom apex of kidney) tube linked to top of bladder from the kidney	[2]	
	(c) Any two : cortex; medulla; pelvis;	[2]	

- 3 (a) (i) chloroplast [1]
- (ii) energy [1]
- (iii) water [1]
- (iv) oxygen [1]
- (v) starch [1]

(b)

4 correct for [3] marks
 2 or 3 correct for [2] marks
 1 correct for [1] mark

[3]

8

- 4 (a) A; D; C; in this order [3]

(b) Any **two**:

A; B; C; in any order (allow cell wall; cell membrane; cytoplasm) [2]

5

- 5 (a) (i) 1600/100;
= 16 mg; [2]
- (ii) bar drawn for 16 (e.c.f.) [1]
- (b) (i) mass decreases/in the pots mass decreases; (allow converse increase in mass from C to A/fewer seeds more mass);
Data: A is 60 and C is 20/difference of 40 between A and C/decreased by two thirds/A is three times as much; [2]
- (ii) number of seedlings increases (from pots A to C)/more and more seedlings/pot A had least seedlings/25 seedling in C/more seedlings in C/most seedlings in C
competition for water/light/minerals/soil oxygen/correct comparison of factor space/less room to grow in C/less light/less water/less minerals/less oxygen in soil [2]

AVAILABLE
MARKS

7

- [1] plankton on bottom row, insects and crustaceans on second row in either order;
[1] for salmon in middle, whales and seals on fourth row in either order ;
[1] for lines with arrows;
[1] for arrow linking crustaceans to seals [4]
- (b) fewer whales/whale population decreases/whale population dies/death of whales;
less reproduction in salmon/less salmon/salmon die/less salmon survive;
less food for whales/no food/competition for food source/whales need to look for another food source [3]
- (c) (i) $78/80 \times 100$;
equals 97.5;
98 [3]
- (ii) cool water/cool river or oceans/cool river down/increase salmon/add more salmon/breeding programme for salmon/less fishing for salmon/
help salmon reproduce/food web described – increased crustaceans for seals to eat so that there is more salmon for the whales [1]

11

7 (a) Indicative content

- 1 (CNS – made up of the) brain;
- 2 (plus) spinal cord;
- 3 coordinates/coordinators;
- 4 controls;
- 5 controls response(s) by effectors; controls responses between receptors and effectors;
- 6 effector named as muscle(s)/gland(s)
- 7 thought/conscious control or brain involved/not automatic; (involuntary) allow converse if reflex stated
- 8 slower (involuntary than reflex) allow converse if reflex stated

Must have at least one point from the 2nd set to get into the top band.

Band	Response	Mark
A	Candidates use appropriate terms throughout to give at least five points from the indicative content. They use good spelling, punctuation and grammar skills. Form and style are of a high standard.	[5]–[6]
B	Candidates use appropriate terms throughout to give at least three or four points from the indicative content. They use satisfactory spelling, punctuation and grammar. Form and style are of a satisfactory standard.	[3]–[4]
C	Candidates use appropriate terms throughout to give one or two points from the indicative content. They use limited spelling, punctuation and grammar and have made little use of specialist terms.	[1]–[2]
D	Response not worthy of credit.	[0]

[6]

- (b) hormonal/hormone allow endocrine;
communication through blood/slower responses/slow chemical messages/
takes place over a longer time [2]

Allow faster responses if nervous system stated

8

- 8 (a) (i) bacteria; fungi; either order [2]

- (ii) starch [1]

- (iii) cellulose [1]

- (b) (i) lignin [1]

- (ii) 30/15;
2; [2]

- (c) slower/less/longer/decreases;
lower temperature/colder/lower amount of oxygen in soil/less material to
decompose/less leaves/reduced enzyme activity/enzymes don't work as
well/enzymes work less/enzymes move slower/enzymes have less
collisions with substrate/enzymes have less kinetic energy [2]
