**MARK
SCHEME**

General Marking Instructions

Introduction

Mark schemes are intended to ensure that the GCSE examinations are marked consistently and fairly. The mark schemes provide markers with an indication of the nature and range of candidates' responses likely to be worthy of credit. They also set out the criteria which they should apply in allocating marks to candidates' responses.

Assessment objectives

Below are the assessment objectives for GCSE Double Award Science.

Candidates must:

- AO1** Demonstrate knowledge and understanding of:
- scientific ideas; and
 - scientific techniques and procedures;
- AO2** Apply knowledge and understanding of and develop skills in:
- scientific ideas; and
 - scientific enquiry, techniques and procedures; and
- AO3** Analyse scientific information and ideas to:
- interpret and evaluate;
 - make judgements and draw conclusions; and
 - develop and improve experimental procedures.

Quality of candidates' responses

In marking the examination papers, examiners should be looking for a quality of response reflecting the level of maturity which may reasonably be expected of a 16-year-old which is the age at which the majority of candidates sit their GCSE examinations.

Flexibility in marking

Mark schemes are not intended to be totally prescriptive. No mark scheme can cover all the responses which candidates may produce. In the event of unanticipated answers, examiners are expected to use their professional judgement to assess the validity of answers. If an answer is particularly problematic, then examiners should seek the guidance of the Supervising Examiner.

Positive marking

Examiners are encouraged to be positive in their marking, giving appropriate credit for what candidates know, understand and can do rather than penalising candidates for errors or omissions. The exception to this for GCSE Double Award Science is when examiners are marking complex calculations when the Examiners are briefed to mark by error or omission. Examiners should make use of the whole of the available mark range for any particular question and be prepared to award full marks for a response which is as good as might reasonably be expected of a 16-year-old GCSE candidate.

Awarding zero marks

Marks should only be awarded for valid responses and no marks should be awarded for an answer which is completely incorrect or inappropriate.

Marking Calculations

In marking answers involving calculations, examiners should apply the 'carry error through' rule so that candidates are not penalised more than once for a computational error. To avoid a candidate being penalised, marks can be awarded where correct conclusions or inferences are made from their incorrect calculations.

Types of mark schemes

Mark schemes for tasks or questions which require candidates to respond in extended written form are marked on the basis of levels of response which take account of the quality of written communication.

Other questions which require only short answers are marked on a point for point basis with marks awarded for each valid piece of information provided.

Levels of response

In deciding which level of response to award, examiners should look for the number of indicative content points in candidate responses to ensure that the answer has been written to coincide with the question. In deciding which mark within a particular level to award to any response, quality of communication will be assessed and examiners are expected to use their professional judgement.

The following guidance is provided to assist examiners.

- ***Threshold performance:*** Response which just merits inclusion in the level and should be awarded a mark at or near the bottom of the range.
- ***High performance:*** Response which fully satisfies the level description and should be awarded a mark at or near the top of the range.

Quality of written communication

Quality of written communication is taken into account in assessing candidates' responses to all tasks and questions that require them to respond in extended written form. These tasks and questions are marked on the basis of bands of response. The description for each band of response includes reference to the quality of written communication.

For conciseness, quality of written communication is distinguished within bands of response as follows:

- Band A: Quality of written communication is excellent.
Band B: Quality of written communication is good.
Band C: Quality of written communication is basic.
Band D: Response not worthy of credit.

In interpreting these band descriptions, examiners should refer to the more detailed guidance provided below:

Band A (Excellent): Excellent reference to scientific terminology. The candidate successfully selects and uses the most appropriate form and style of writing. Relevant material is organised with a high degree of clarity and coherence. There is widespread and accurate use of appropriate specialist vocabulary. Presentation, spelling, punctuation and grammar are of a sufficiently high standard to make meaning clear.

Band B (Good): Good reference to scientific terminology. The candidate makes a reasonable selection and use of an appropriate form and style of writing. Relevant material is organised with some clarity and coherence. There is some use of appropriate specialist vocabulary. Presentation, spelling, punctuation and grammar are sufficiently competent to make meaning clear.

Band C (Basic): Basic reference to scientific terminology. The candidate makes only a limited selection and use of an appropriate form and style of writing. The organisation of material may lack clarity and coherence. There is little use of specialist vocabulary. Presentation, spelling, punctuation and grammar may be such that intended meaning is not clear.

- 1 (a) animal/egg; [1]
- (b) cell membrane;
cytoplasm;
nucleus/chromosomes; In this order [3]
- 2 (a) combustion/burning;
photosynthesis;
respiration; [3]
- (b) (i) decomposition/decay; [1]
- (ii) humus; [1]

3

Biological molecule	Reagent	Initial colour	End colour for positive result
starch	iodine	yellow-brown	blue-black
fat/lipid	ethanol	colourless	white/milky white/ cloudy (emulsion)
protein	biuret	blue	lilac

[5]

AVAILABLE
MARKS

4

5

5

- 4 (a) (i) Any **two** from:
protein;
biological catalyst;
speeds up reactions/speeds up rate of reaction/
enzyme not used up (in the reaction); [2]

(ii)

Enzyme	Substrate
	glucose
amylase	protein
lipase	starch
protease	amino acids
	fat

[3]

(b)

Statement	greater	the same	less
the amount of catalase enzyme in the potato cylinder in D compared to B was	✓		
the amount of gas froth produced in B compared to C was			✓
the rate of reaction in A compared to B was		✓	
when the student repeated this experiment, the amount of gas froth produced in beaker D was		✓	

[1] mark per row

allow only one tick per row

[4]

- (c) specific; [1]

10

- 5 (a) (i) Any **two** from:
 highest breathing rate at rest/higher than A or B (others) at rest;
 highest breathing rate after exercise/higher than A or B (others) after exercise;
 greatest increase in breathing rate/increase in breathing rate is higher than A or B (others);
- breathing rate at rest 1 more than student A/3 more than student B/
 breathing rate after exercise 3 more than student A/8 more than student B;
 after exercise - increase in breathing rate is 23 in C, 18 in A, 21 in B/in C 5 more than A, 2 more than B; [3]
- (ii) greater than 9 or more; [1]
- (b) **more** oxygen taken in/need increased oxygen;
 respiration/energy/muscles
 for 2 marks need to say more once (or implied increase); [2]

AVAILABLE
MARKS

6

6 (a)

- [1] mark for brazil nut (tree) and rubber (tree) at the bottom in either order;
 [1] mark for jaguar and spider monkey;
 [1] mark for 7 lines (3 at top, 4 on bottom);
 [1] mark for all arrows they have; [4]
- (b) (i) sun/sunlight/light; [1]
- (ii) 2; [1]
- (c) (i) decreases; less food for the macaws/**or** spider monkeys/less monkeys/
 less macaws/more competition;
 less food for the jaguars; [3]
- (ii) water/light/minerals/named minerals/soil oxygen/
 sun/sunlight/moisture/space/carbon dioxide; [1]

10

7 (a) (i) pancreas;	[1]	AVAILABLE MARKS
(ii) hormone;	[1]	
(iii) in the blood;	[1]	
(b) (i) lowers (blood glucose concentration)/reduces/decreases/goes back down to normal;	[1]	
(ii) glucose converted/stored/turned into glycogen;		
more respiration;		
more uptake of glucose;		
glucose converted/stored/turned into fat;	[3]	
(c) (i) 99 833 – 75 837 = 23 996; = 1 mark		
23 996/75 837 × 100; = 2 marks		
31.641547; = 3 marks		
32; = 4 marks	[4]	
(ii) line extended with same slope;		
106.5 to 108;	[2]	
(d) lack of exercise/too many sugary foods/obesity/eating more fatty foods/		
increasing population	[1]	14

8 Indicative content

- 1 carbon dioxide/CO₂;
- 2 enter the leaf at G between F cells;
- 3 into E;
- 4 moves through layer D;
- 5 moves into layer C;
- 6 by diffusion;

Band	Response	Mark
A	Candidates use appropriate terms throughout to give at least five points from the indicative content. They use good spelling, punctuation and grammar skills. Form and style are of a high standard.	[5]–[6]
B	Candidates use appropriate terms throughout to give at least three or four points from the indicative content. They use satisfactory spelling, punctuation and grammar. Form and style are of a satisfactory standard.	[3]–[4]
C	Candidates use appropriate terms throughout to give one or two points from the indicative content. They use limited spelling, punctuation and grammar and have made little use of specialist terms.	[1]–[2]
D	Response not worthy of credit.	[0]

If they do not have any relevant indicative points then they **cannot** get a QWC mark. Must stay within the band of indicative marks. [6]
