Unit C1

Foundation Tier

[GDW21]

GDW21

FRIDAY 27 MAY 2022, MORNING

TIME

1 hour.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

You must answer the questions in the spaces provided.

Do not write outside the boxed area on each page or on blank pages.

Complete in black ink only. **Do not write with a gel pen.**

Answer **all eight** questions.

INFORMATION FOR CANDIDATES

The total mark for this paper is 60.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

Quality of written communication will be assessed in Question 8.

A Data Leaflet, which includes a Periodic Table of the elements is provided.

- 1 The diagram below shows one of the methods used to separate mixtures.

Source: Principal Examiner

- (a) Complete the sentences below by **circling** the correct answers.

This method of separation is called

filtration.
evaporation.
distillation.

Cold water circulates through the

flask.
condenser.
beaker.

This apparatus could be used to separate

sand from salt water.
red dye from ink.
pure water from sea water.

[3]

(b) Match the following metal ions to the colours of their flames by using straight lines.

Metal ion

lithium

copper

calcium

Flame colour

brick red

crimson

green-blue

[2]

2 Phosphorus has an atomic number of 15 and a mass number of 31.

- (a) (i) Complete the table below to show the charge on a neutron and the number of electrons, protons and neutrons in an atom of phosphorus.

particle	relative charge	number present in an atom of phosphorus
proton	+1	
electron	-1	
neutron		

[4]

- (ii) How many electron **shells** are there in an atom of phosphorus?

Circle the correct answer.

1 2 3 4 5

[1]

- (b) Complete the sentence below, using words from the list, to give the definition of a compound.

molecules atoms elements ions
separated combined arranged mixed

A compound is two or more _____ chemically

_____.

[2]

[Turn over

16GDW2105

- 3 (a) Complete the word equation for the reaction of nitric acid with calcium carbonate.

nitric acid + calcium carbonate $\longrightarrow$ + water +

[2]

- (b) The four substances from the list below all react with sulfuric acid.
Choose substances from the list below to answer the questions which follow.

magnesium

sodium hydroxide

copper oxide

sodium hydrogencarbonate

How many of these reactions will:

produce a gas?

produce a coloured solution?

give sodium sulfate as a product?

[3]

- (c) When sulfuric acid is added to sodium hydroxide solution will the temperature rise, fall or stay the same?

[1]

(d) The picture below shows a hazard symbol.

Source: © Getty Images

What does this hazard symbol mean?
Circle the correct answer from the list below.

toxic

corrosive

caution

flammable

harmful

[1]

- 4 Over 100 elements are known and they are arranged in the Periodic Table.

Use your Data Leaflet to help you answer this question.

- (a) Complete the sentence below to describe an element.

An element is a substance that consists of only one type of

_____ and cannot be broken down into simpler substances by _____ means.

[2]

- (b) Complete the sentences, about the Periodic Table, by **circling** the correct answers:

In the Periodic Table the vertical columns are called

groups.

rows.

periods.

The horizontal rows are called

groups.

blocks.

periods.

[2]

- (c) On the outline of the Periodic Table below shade in the area where the alkali metals can be found.

[1]

- (d) Arsenic is an element in the periodic table with an atomic number of 33. How many electrons would you expect arsenic to have in its outer shell?

[1]

- (e) Some methods of classifying elements are shown in the diagram below. Different regions in the diagram are referred to as A, B, C, D, E, F or G.

Use the letters A, B, C, D, E, F or G to complete the table below. Identify which region in the diagram each element belongs to.

The first one has been done for you.

element	region
copper	F
magnesium	
mercury	
bromine	

[3]

[Turn over]

5 Three alkali metals A, B and C were investigated in a school laboratory.

The table below shows what happened when a small piece of each of these metals was dropped into a trough of water.

Metal	Did the metal sink?	Did the metal melt to form a ball?	Did the metal catch fire immediately?	Was fizzing observed?
A	no	yes	no	yes
B	no	no	no	yes
C	no	yes	yes	yes

(a) Use the information above to help you answer the following questions:

(i) Name the three alkali metals.

metal A _____

metal B _____

metal C _____ [3]

(ii) Give one **risk** associated with using these metals and explain how it can be safely managed in the laboratory.

Risk _____ [1]

How it is managed _____ [1]

(b) Hydrogen gas is produced when alkali metals reacts with water. Describe the test for hydrogen gas.

_____ [2]

- 6 (a) (i) Complete the sentence below, to give the definition of an ion, by using words from the list.

protons atoms charged neutral isotopes
electrons neutrons molecule

Ions are _____ particles formed when
_____ gain or lose _____. [3]

- (ii) Choose the **molecular ion** from the list below by circling it.

NaOH Mg²⁺ Cl⁻ HCO₃⁻ H₂O

[1]

- (b) (i) Sodium oxide is an ionic compound with the formula Na₂O.

Describe fully the change to the electronic configuration of the **sodium atom** when it forms an ionic bond with oxygen.

_____ [2]

- (ii) Describe fully the change to the electronic configuration of the **oxygen atom** when it forms an ionic bond with sodium.

_____ [2]

- (c) Draw a dot and cross diagram of a molecule of hydrogen fluoride, HF.
Show outer shell electrons only.

[3]
[Turn over]

7 (a) Complete the definition of relative atomic mass below:

The relative atomic mass of an atom is _____
compared with that of the _____ which has a mass of
exactly 12. [2]

(b) Calculate the relative formula mass (M_r) of each of the following substances.

(relative atomic masses: H = 1, C = 12, O = 16, Al = 27, S = 32, Cu = 64, Rb = 85)

rubidium hydroxide RbOH

_____ [1]

copper(II) sulfate CuSO_4

_____ [1]

aluminium hydrogencarbonate $\text{Al}(\text{HCO}_3)_3$

_____ [1]

(c) The relative formula mass (M_r) of iron(III) oxide is 160.

- (i) Calculate the number of moles in 23.0 g of iron(III) oxide.
Give your answer to 2 decimal places.

_____ [2]

- (ii) What is the mass, in grams, of 2.75 moles of iron(III) oxide?

_____ g [1]

[Turn over]

8 The element carbon exists as allotropes including diamond and graphite.

Use your knowledge and understanding of the term allotropes and of the structure and bonding of carbon to:

- Define what is meant by the term allotrope
- Describe the bonding and structure of diamond
- Describe ways in which the bonding and structure of graphite is similar to and different from that of diamond

In this question you will be assessed on your written communication skills including the use of specialist scientific terms.

Definition of allotrope:

Description of the bonding and structure of diamond:

Description of ways in which the bonding and structure of graphite is similar to and different from that of diamond:

similarities: _____

differences: _____

[6]

SYMBOLS OF SELECTED IONS

Positive ions

Name	Symbol
Ammonium	NH_4^+
Chromium(III)	Cr^{3+}
Copper(II)	Cu^{2+}
Iron(II)	Fe^{2+}
Iron(III)	Fe^{3+}
Lead(II)	Pb^{2+}
Silver	Ag^+
Zinc	Zn^{2+}

Negative ions

Name	Symbol
Butanoate	$\text{C}_3\text{H}_7\text{COO}^-$
Carbonate	CO_3^{2-}
Dichromate	$\text{Cr}_2\text{O}_7^{2-}$
Ethanoate	CH_3COO^-
Hydrogencarbonate	HCO_3^-
Hydroxide	OH^-
Methanoate	HCOO^-
Nitrate	NO_3^-
Propanoate	$\text{C}_2\text{H}_5\text{COO}^-$
Sulfate	SO_4^{2-}
Sulfite	SO_3^{2-}

Data Leaflet

Including the Periodic Table of the Elements

For the use of candidates taking
Science: Chemistry,
Science: Double Award
or Science: Single Award

Copies must be free from notes or additions of any
kind. No other type of data booklet or information
sheet is authorised for use in the examinations

SOLUBILITY IN COLD WATER OF COMMON SALTS, HYDROXIDES AND OXIDES

Soluble
All sodium, potassium and ammonium salts
All nitrates
Most chlorides, bromides and iodides EXCEPT silver and lead chlorides, bromides and iodides
Most sulfates EXCEPT lead and barium sulfates Calcium sulfate is slightly soluble
Insoluble
Most carbonates EXCEPT sodium, potassium and ammonium carbonates
Most hydroxides EXCEPT sodium, potassium and ammonium hydroxides
Most oxides EXCEPT sodium, potassium and calcium oxides which react with water
