

# Mark Scheme (Results)

January 2016

Pearson Edexcel International  
Advanced Level  
in Biology (WBI04)  
Paper 04 - The Natural Environment  
and Species Survival

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## **General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

| Question Number | Answer       | Additional guidance | Mark |
|-----------------|--------------|---------------------|------|
| 1(a)(i)         | A amino acid |                     | (1)  |

| Question Number | Answer                                   | Additional guidance    | Mark |
|-----------------|------------------------------------------|------------------------|------|
| 1(a)(ii)        | condensation / polymerisation (reaction) | <b>IGNORE</b> addition | (1)  |

| Question Number | Answer                                 | Additional guidance | Mark |
|-----------------|----------------------------------------|---------------------|------|
| 1(a)(iii)       | A NH <sub>2</sub> group and COOH group |                     | (1)  |

| Question Number | Answer    | Additional guidance | Mark |
|-----------------|-----------|---------------------|------|
| 1(b)(i)         | C 2 and 4 |                     | (1)  |

| Question Number | Answer                                               | Additional guidance | Mark |
|-----------------|------------------------------------------------------|---------------------|------|
| 1(b)(ii)        | C antibiotics kill or prevent the growth of bacteria |                     | (1)  |

| Question Number | Answer                                                                                                                                | Additional guidance                                                                                                                                                                   | Mark |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 1(c)            | 1. ointment / cream / lotion / eq ;<br><br>2. can act fast / delivered in high quantities / not broken down in digestive tract / eq ; | <b>1. ACCEPT</b> topically<br><br><b>2. ACCEPT</b> localised / applied directly / produces few side effects / direct contact with bacteria / more effective / will not kill gut flora | (2)  |

| Question Number | Answer                                                                                                                                                                                                                                                                                                                   | Additional guidance                                                                                                                                                                      | Mark       |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>1(d)</b>     | 1. idea of using only when necessary ;<br>2. idea that patients should finish the course ;<br>3. idea of using narrow {spectrum / range} antibiotics ;<br>4. idea of not using just in case infection occurs ;<br>5. idea of using appropriate antibiotic (for the infection) ;<br>6. idea of rotating the antibiotics ; | <b>IGNORE</b> irrelevant suggestions<br><b>1. ACCEPT</b> not using for viral infections<br><br><b>3. DO NOT ACCEPT</b> use broad spectrum<br><b>4. ACCEPT</b> not using prophylactically | <b>(2)</b> |

| Question Number | Answer                                                                                                                                                                                    | Additional guidance | Mark |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|------|
| 2(a)            | (group of) (same) cells<br><br><b>AND</b><br><br>with {same / similar / specific / particular / common / eq}<br><br><b>AND</b><br><br>{structure / job / task / function / origin / eq} ; |                     | (1)  |

| Question Number | Answer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Additional guidance                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Mark |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 2(b)            | <ol style="list-style-type: none"> <li>1. the gas exchange surface is the cell wall (and membrane) ;</li> <li>2. so the diffusion distance is small (between air space and cytoplasm) ;</li> <li>3. idea that the carbon dioxide can { continuously enter the leaf /circulate around the cells } ;</li> <li>4. maintains a concentration gradient (between air space and cell) ;</li> <li>5. idea that the (spongy mesophyll) cells are { irregularly shaped / loosely packed / have (air) spaces (between them) / eq } ;</li> <li>6. large surface area (to volume ratio) ;</li> <li>7. (air spaces / loosely packed) make diffusion {fast / eq} (through air spaces) ;</li> </ol> | <p><b>N.B. 4 marks can only be awarded if at least one explanation (mp 2, 4, 6, 7, 9) is linked to an adaptation (mp 1, 3, 5, 8)</b></p> <p><b>3. ACCEPT</b> carbon dioxide used {by cells / for photosynthesis}</p> <p><b>N.B.</b> stand alone mark, does not have to be linked to mp 5</p> <p><b>7. ACCEPT</b> diffusion easy<br/><b>ACCEPT:</b></p> <p>8. (spongy / palisade mesophyll) cells are moist/ eq ;</p> <p>9.(moisture) to dissolve the carbon dioxide / eq ;</p> | (4)  |

| Question Number | Answer                                                                                                                                                                                                                                                                                                                                                                                           | Additional guidance                                                                                                                                   | Mark |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 2(c)            | 1. idea that carbon dioxide dissolves (in the moisture layer / cytoplasm) ;<br>2. idea that carbon dioxide { diffuses / moves / enters } into the { chloroplasts / stroma } ;<br>3. idea that carbon dioxide binds to RuBP / reference to carbon fixation / { reduction of carbon dioxide / eq } ;<br>4. reference to { Calvin cycle / light-independent reaction } ;<br>5. to produce GP / eq ; | <b>1. ACCEPT</b> carbon dioxide is soluble (in moisture)<br><br><b>3. ACCEPT</b> ribulose biphosphate<br><br><b>5. ACCEPT</b> glycerate (3) phosphate | (4)  |

| Question Number | Answer                                                                                                                                                                                                                                                                                                        | Additional guidance                                                                                                                                                                                    | Mark |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 2(d)            | 1. water for photolysis / eq ;<br><b>Accept any TWO from :</b><br>2. { phosphate / $P_i$ / $PO_4^{3-}$ } for ATP synthesis / eq ;<br>3. magnesium (ions) for chlorophyll ;<br>4. nitrate for { ATP / electron carrier protein / RUBISCO / ATP ase / enzymes involved in photosynthesis / chlorophyll / eq } ; | <b>NB</b> Use of formulae must be correct<br><b>1. ACCEPT</b> idea that water acts as a solvent for {carbon dioxide / enzymes / eq}<br><br><b>4. IGNORE</b> enzymes unqualified, proteins, amino acids | (3)  |

| Question Number | Answer                                                                                                                                                                                                                                                    | Additional guidance                                                                                                                  | Mark |
