Sample Assessment Material for first teaching September 2017

Time: 50 minutes

Paper Reference

8FM0/2G

You must have:

Mathematical Formulae and Statistical Tables, calculator

Total Marks

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for algebraic manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 4 questions in this question paper. The total mark for this paper is 40.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

1. In a gymnastics competition, two judges scored each of 8 competitors on the vault.

Competitor	A	B	C	D	E	F	G	H
Judge 1's scores	4.6	9.1	8.4	8.8	9.0	9.5	9.2	9.4
Judge 2's scores	7.8	8.8	8.6	8.5	9.1	9.6	9.0	9.3

- (a) Calculate Spearman's rank correlation coefficient for these data. (4)
- (b) Stating your hypotheses clearly, test at the 1% level of significance, whether or not the two judges are generally in agreement. (4)
- (c) Give a reason to support the use of Spearman's rank correlation coefficient in this case. (1)

Spearman's rank correlation coefficient for their ranks on the beam was found to be 0.952

- (d) Compare the judges' ranks on the vault with their ranks on the beam. (1)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

(Total for Question 1 is 10 marks)

2. The continuous random variable X has probability density function

$$f(x) = \begin{cases} \frac{1}{18}(11-2x) & 1 \leq x \leq 4 \\ 0 & \text{otherwise} \end{cases}$$

(a) Find $P(X < 3)$

(b) State, giving a reason, whether the upper quartile of X is greater than 3, less than 3 or equal to 3

Given that $E(X) = \frac{9}{4}$

(c) use algebraic integration to find $\text{Var}(X)$ (3)

The cumulative distribution function of X is given by

$$F(x) = \begin{cases} 0 & x < 1 \\ \frac{1}{18}(11x - x^2 + c) & 1 \leq x \leq 4 \\ 1 & x > 4 \end{cases}$$

(d) Show that $c = -10$ (2)

(e) Find the median of X , giving your answer to 3 significant figures. (3)

Question 2 continued

Lined area for writing answers.

(Total for Question 2 is 11 marks)

3. A scientist wants to develop a model to describe the relationship between the average daily temperature, $x^{\circ}\text{C}$, and a household's daily energy consumption, $y\text{kWh}$, in winter.

A random sample of the average temperature and energy consumption are taken from 10 winter days and are summarised below.

$$\sum x = 12 \quad \sum x^2 = 24.76 \quad \sum y = 251 \quad \sum y^2 = 6341 \quad \sum xy = 284.8$$

$$S_{xx} = 10.36 \quad S_{yy} = 40.9$$

- (a) Find the product moment correlation coefficient between y and x . (2)
- (b) Find the equation of the regression line of y on x in the form $y = a + bx$ (3)
- (c) Use your equation to estimate the daily energy consumption when the average daily temperature is 2°C (1)
- (d) Calculate the residual sum of squares (RSS). (2)

The table shows the residual for each value of x .

x	-0.4	-0.2	0.3	0.8	1.1	1.4	1.8	2.1	2.5	2.6
Residual	-0.63	-0.32	-0.52	-0.73	0.74	2.22	1.84	0.32	f	-1.88

- (e) Find the value of f . (2)
- (f) By considering the signs of the residuals, explain whether or not the linear regression model is a suitable model for these data. (1)

4. The continuous random variable X is uniformly distributed over the interval $[-3, 5]$.

(a) Sketch the probability density function $f(x)$ of X .

(2)

(b) Find the value of k such that $P(X < 2[k - X]) = 0.25$

(3)

(c) Use algebraic integration to show that $E(X^3) = 17$

(3)
