

Please check the examination details below before entering your candidate information

Candidate surname		Other names	
Pearson Edexcel International Advanced Level		Centre Number	Candidate Number
Tuesday 19 January 2021			
Morning (Time: 1 hour 20 minutes)		Paper Reference WPH16/01	
Physics Advanced Unit 6: Practical Skills in Physics II			
You must have: Scientific Calculator, Ruler			Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- **Show all your working out in calculations and include units where appropriate.**

Information

- The total mark for this paper is 50.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- The list of data, formulae and relationships is printed at the end of this booklet.
- Candidates may use a scientific calculator.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

1/1/1/1/1/

Answer ALL questions.

- 1 A ball rolls along a U-shaped track. The ball oscillates in a vertical plane as shown.

- (a) Describe how the time period of the oscillations should be measured to make the readings as accurate as possible.

(3)

.....

.....

.....

.....

.....

.....

- (b) Describe how a single measure of D should be made accurately.

(2)

.....

.....

.....

.....

.....

(c) A student determined the time period T for different values of the distance D .
She obtained the following results.

D / m	0.235	0.335	0.445
T / s	0.78	0.94	1.09

She predicts that for these oscillations

$$T \propto \sqrt{D}$$

Show that her results are consistent with this prediction.

(3)

(Total for Question 1 = 8 marks)

- 2 Two identical capacitors were connected in series and charged. They were then discharged through a resistor and ammeter.

A student investigated how the current in the resistor varied as the capacitors discharged.

- (a) Draw an appropriate circuit diagram for this investigation.

(3)

- (b) State **one** safety precaution the student should take.

(1)

- (c) The student had a stopwatch.

Describe how the student should determine an accurate value for the total capacitance of the capacitors.

(6)

- (d) The student repeated the investigation but used a data logger instead of a stopwatch and an ammeter.

Suggest why using a data logger would improve this investigation.

(2)

(Total for Question 2 = 12 marks)

- 3 When high energy electrons are incident on a sample of an isotope, a diffraction pattern is produced. The diffraction pattern can be used to determine the radius of a nucleus of the isotope.

The relationship between the radius r of a nucleus and the nucleon number A is

$$r = r_0 A^n$$

where r_0 is the radius of a proton and n is a constant.

- (a) Explain why a graph of $\log r$ against $\log A$ can be used to determine a value for n . (2)

.....

.....

.....

.....

- (b) The table shows the values of r for some different isotopes.

Isotope	A	r / fm		
H-2	2	1.54		
He-4	4	1.92		
Be-9	9	2.47		
C-12	12	2.72		
O-16	16	3.00		
Mg-24	24	3.42		

- (i) Plot a graph of $\log r$ against $\log A$ on the grid. Use the additional columns in the table to record your processed data. You should **not** convert the values of r to metres. (6)
- (ii) Use your graph to determine the value of n . (2)

.....

.....

$n =$

4 A cylindrical container is made from a transparent material. Two students want to determine the density of this material.

- (a) The students need to make measurements to determine the volume of the transparent material. The external diameter of the container is approximately 10 cm.

Student A suggests measuring the external diameter with a metre rule.

Student B suggests placing a piece of string around the circumference of the container and then measuring this length of string with a metre rule.

Explain which of these measurements would have the least percentage uncertainty.

(2)

.....

.....

.....

.....

.....

.....

.....

.....

- (b) The students decide to use string to determine the circumference of the container. They measure the thickness t of the string using a micrometer screw gauge.

- (i) Explain **two** techniques that could be used to make sure this measurement is as accurate as possible.

(2)

.....

.....

.....

.....

.....

.....

(ii) The following measurements were obtained.

t / mm				
2.15	2.06	2.13	2.08	2.10

Calculate the mean value of t in mm and its uncertainty.

(2)

mean $t = \dots\dots\dots \text{mm} \pm \dots\dots\dots \text{mm}$

(c) The circumference C of the container can be determined using the formula

$$C = x - \pi t$$

where x is the length of string around the container.

(i) Calculate the value of C in cm.

$$x = 25.8 \text{ cm} \pm 0.2 \text{ cm}$$

(2)

$C = \dots\dots\dots \text{cm}$

(ii) Show that the uncertainty in C is approximately 0.2 cm.

(1)

(d) The volume V of the transparent material is given by

$$V = \frac{C^2 L}{4\pi} - V_i$$

where L is the length of the container and V_i is the internal volume of the container.

Determine the value of V in cm^3 and its uncertainty.

$$L = 19.90 \text{ cm} \pm 0.05 \text{ cm}$$

$$V_i = 810 \text{ cm}^3 \pm 5 \text{ cm}^3$$

(4)

$$V = \dots\dots\dots \text{cm}^3 \pm \dots\dots\dots \text{cm}^3$$

- (e) The table shows the densities of some common materials used to manufacture this type of container. Only borosilicate is safe to heat directly with a Bunsen burner.

Material	Soda glass	Borosilicate	Perspex
$\rho / \text{g cm}^{-3}$	2.52	2.23	1.18

The mass of the container was measured as $463 \text{ g} \pm 1 \text{ g}$.

Deduce whether the container is safe to heat directly with a Bunsen burner.

(4)

(Total for Question 4 = 17 marks)

TOTAL FOR PAPER = 50 MARKS

List of data, formulae and relationships

Acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$	(close to Earth's surface)
Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$	
Electron charge	$e = -1.60 \times 10^{-19} \text{ C}$	
Electron mass	$m_e = 9.11 \times 10^{-31} \text{ kg}$	
Electronvolt	$1 \text{ eV} = 1.60 \times 10^{-19} \text{ J}$	
Gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$	
Gravitational field strength	$g = 9.81 \text{ N kg}^{-1}$	(close to Earth's surface)
Permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$	
Coulomb's law constant	$k = 1/4\pi\epsilon_0$ $= 8.99 \times 10^9 \text{ N m}^2 \text{ C}^{-2}$	
Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$	
Proton mass	$m_p = 1.67 \times 10^{-27} \text{ kg}$	
Speed of light in a vacuum	$c = 3.00 \times 10^8 \text{ m s}^{-1}$	
Stefan-Boltzmann constant	$\sigma = 5.67 \times 10^{-8} \text{ W m}^{-2} \text{ K}^{-4}$	
Unified atomic mass unit	$u = 1.66 \times 10^{-27} \text{ kg}$
