Paper 6 Probability & Statistics 2

May/June 2025

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **16** pages. Any blank pages are indicated.

BLANK PAGE

- Explain how a single throw of a fair six-sided dice could be used to make the choice. [1]

.....

.....

.....

(b) Find the probability that the difference between the times taken by these two students to complete the test is more than 12 minutes. [5]

- Using a hypothesis test at the 5% significance level, the manager finds that there is sufficient evidence to conclude that the new value of μ is greater than 10.5.

Stating a necessary assumption, find the smallest possible value of $\bar{x}$. [4]

This image shows a full page of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page, typical of notebook or legal stationery. There are no margins, text, or other markings on the page.

6 Use suitable approximating distributions to answer the following.

(a) The random variable W has the distribution $B(700, 0.005)$.

(i) Find $P(W \geq 4)$.

[3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

Two values of W are chosen at random.

(ii) Find the probability that the sum of these two values is less than 3.

[3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Use a suitable approximating distribution to find $P(X > 205)$. [4]

[illegible]

7 The random variable X has probability density function given by

$$f(x) = \begin{cases} \frac{kx^2}{a^2} & 0 \leq x \leq a, \\ 0 & \text{otherwise,} \end{cases}$$

where k and a are positive constants.

(a) Show that $k = \frac{3}{a}$. [3]

.....

.....

.....

.....

.....

.....

.....

.....

It is given that $E(X) = 1$.

(b) Find the value of a . [3]

.....

.....

.....

.....

[3]

This image shows a full page of white paper with horizontal dotted lines. The lines are evenly spaced and run across the width of the page, providing a guide for handwriting practice. There are no margins, text, or other markings on the page.

- (a)** Use a binomial distribution with a 5% significance level to test Birgitte's suspicion. [5]

[illegible]

Later, Birgitte carries out a similar test at the 5% significance level, using another 30 throws of the dice.

(b) Calculate the probability of a Type I error. [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(c) Given that the value of p is actually 0.02, calculate the probability of a Type II error. [3]

.....
