Paper 2 Pure Mathematics 2

February/March 2022

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **12** pages.

1 Solve the equation $|5x - 2| = |4x + 9|$.

[3]

[illegible]

2 A curve has equation $y = 7 + 4 \ln(2x + 5)$.

Find the equation of the tangent to the curve at the point $(-2, 7)$, giving your answer in the form $y = mx + c$. [5]

This image shows a full page of a worksheet designed for handwriting practice. It consists of multiple rows of horizontal dashed lines spaced evenly across the page, providing a guide for letter height and placement. The background is plain white, and there are no other markings or text present.

- 3 The variables x and y satisfy the equation $y = 3^{2a}a^x$, where a is a constant. The graph of $\ln y$ against x is a straight line with gradient 0.239.

(a) Find the value of a correct to 3 significant figures. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) Hence find the value of x when $y = 36$. Give your answer correct to 3 significant figures. [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- 4 (a) Show that $\sin 2\theta \cot \theta - \cos 2\theta \equiv 1$.

[3]

.....

.....

.....

.....

.....

.....

.....

.....

- (b) Hence find the exact value of $\sin \frac{1}{6}\pi \cot \frac{1}{12}\pi$.

[2]

.....

.....

.....

.....

.....

.....

.....

- (c) Find the smallest positive value of θ (in radians) satisfying the equation

$$\sin 2\theta \cot \theta - 3 \cos 2\theta = 1.$$

[2]

.....

.....

.....

.....

.....

- 5 (a) Given that $y = \tan^2 x$, show that $\frac{dy}{dx} = 2 \tan x + 2 \tan^3 x$. [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (b) Find the exact value of $\int_{\frac{1}{4}\pi}^{\frac{1}{3}\pi} (\tan x + \tan^2 x + \tan^3 x) dx$. [6]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

6 The polynomial $p(x)$ is defined by

$$p(x) = 4x^3 + 16x^2 + 9x - 15.$$

- (a) Find the quotient when $p(x)$ is divided by $(2x + 3)$, and show that the remainder is -6 . [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (b) Find $\int \frac{p(x)}{2x + 3} dx$. [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (c)** Factorise $p(x) + 6$ completely and hence solve the equation

$$p(\operatorname{cosec} 2\theta) + 6 = 0$$

for $0^\circ < \theta < 135^\circ$.

[5]

[illegible]

7 A curve has equation $e^{2x}y - e^y = 100$.

(a) Show that $\frac{dy}{dx} = \frac{2e^{2x}y}{e^y - e^{2x}}$. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) Show that the curve has no stationary points. [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

It is required to find the x -coordinate of P , the point on the curve at which the tangent is parallel to the y -axis.

- (c) Show that the x -coordinate of P satisfies the equation

$$x = \ln 10 - \frac{1}{2} \ln(2x - 1). \quad [4]$$

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (d) Use an iterative formula, based on the equation in part (c), to find the x -coordinate of P correct to 3 significant figures. Use an initial value of 2 and give the result of each iteration to 5 significant figures. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....
