First name(s)

Last name

INSTRUCTIONS

- Use black ink.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- Answer **all** the questions.

INFORMATION

- The total mark for this paper is **75**.
- The marks for each question are shown in brackets [].
- Quality of extended response will be assessed in questions marked with an asterisk (*).
- This document has **16** pages.

ADVICE

- Read each question carefully before you start your answer.

Section A

Core studies

- 1 (a) Participants in Grant et al.'s (1998) study into context-dependent memory completed two types of test.

Identify which **one** of these types of test was completed first.

.....
..... [1]

- (b) (i) Outline why Loftus and Palmer conducted their (1974) experiments into eyewitness testimony.

.....
.....
.....
.....
.....
..... [3]

- (ii) Describe how the independent variable (IV) was manipulated in Loftus and Palmer's (1974) **second experiment** into eyewitness testimony.

.....
.....
.....
.....
.....
..... [3]

- 2 (a) Outline **two** controls used by Milgram's (1963) study into obedience.

1

.....

.....

.....

.....

2

.....

.....

.....

.....

[4]

- (b) Bocchiaro et al. used a comparison group to predict the results of their (2012) study into disobedience and whistle-blowing.

Describe the procedure used in this part of the study.

.....

.....

.....

.....

.....

.....

.....

[3]

- 3 (a) Bandura et al. (1961) in their study on transmission of aggression used an independent measures design.

Explain a strength of this design as used in this study.

.....

.....

.....

.....

..... [2]

- (b) Identify **two** features of the sample used in Chaney et al.'s (2004) Funhaller study.

1

2 [2]

- 4 Describe how the type of data collected **and** the equipment used differed between Sperry's (1968) study on hemisphere disconnection and Casey et al.'s (2011) study on neural correlates of delay of gratification.

Type of data collected

.....

.....

.....

.....

The equipment used

.....

.....

.....

..... [4]

- 5 Baron-Cohen et al. conducted a (1997) study into autism in adults.

Outline how the procedure used in the Eyes task helped to ensure the reliability of the findings.

.....

.....

.....

.....

.....

.....

.....

..... [3]

Section B**Areas, perspectives and debates**

- 6 (a)** Outline the defining principles of the nature/nurture debate.

.....

.....

.....

.....

..... [2]

- (b)** Explain how Freud's (1909) study of Little Hans can support the nature side of the nature/nurture debate.

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

..... [3]

- (c)** Explain how Chaney et al.'s (2004) Funhaller study can support the nurture side of the nature/nurture debate.

[3]

- (d)** Describe **two** strengths of the biological area. Support your answer with evidence from appropriate core studies.

[6]

This image shows a full page of a handwriting practice worksheet. It consists of multiple rows of horizontal dotted lines spaced evenly down the page, providing a guide for letter height and placement. The background is plain white, and there are no other markings or text present.

Section C

Practical applications

In the 1600s the philosopher John Locke believed that what is learnt in a given environment is best recalled in that environment. In 1975, Locke's belief was tested by Godden and Baddeley who used members of a university diving club as participants in an experiment in two different environments – on land and underwater. In a free recall experiment, the same divers learnt lists of words both on land and underwater. They were then asked to recall the words in either the environment of original learning, or in the alternative environment. Lists learnt underwater were recalled significantly better underwater, and lists learnt on land were recalled significantly better on land.

Based on: Godden, D. R. and Baddeley, A. D. (1975). Context-dependent memory in two natural environments: On land and underwater. *British Journal of Psychology*, 66, (3), 325–331.

- 7 (a) With reference to the article, identify the research design used by Godden and Baddeley.

.....

.....

..... [2]

- (b) With reference to the article, suggest why Godden and Baddeley's research had high ecological validity.

.....

.....

.....

.....

.....

..... [2]

- (c) Explain how this article links to the cognitive area of psychology.

.....

.....

.....

.....

.....

..... [2]

- (d) Outline how this article can be linked to Grant et al.'s (1998) study into context-dependent memory.

.....

.....

.....

.....
